

# Lean Implementer Workshop (3 Days)

## Program Participants:

Managers, engineers, executives, staffs, consultants interested in improving their knowledge on LEAN concept and it's implementation at their work place to bring changes. This module helps in bringing changes right from thinking to processes, systems till activity level. People working in service sector, process industry and/ or manufacturing establishments can apply & get benefitted from this. Supply Chain & Vendor Development today are key dependencies in any business so professionals from there who wish to enhance their supply chain capability, speed & efficiency to make it more flexible and responsive to their customer requirements can very well utilize this for quick results.

## Program Overview:

**Lean Program** which is often known simply as "Lean" is a generic process management philosophy derived mostly from the **Toyota Production System (TPS)**. It is a powerful method that allows organizations to improve the productivity, efficiency, quality & time to market for their products and/or services. Companies today, from a wide range of industries, government agencies and across the geographies are finding opportunities to apply the principles of lean as a means of producing goods, delivering services and improve their supply chain to create value for the customer with minimum amount of waste and the highest level of quality.
